RE: LICENCE AMENDMENT APPLICATION – INCREASE TO APPROVED THROUGHPUT VOLUME AND ADDITION OF NEW PRODUCT – L8937/2015/1

Pilbara Ports Authority (PPA) currently holds a prescribed premise licence L8937/2015/1 (L8937) for the export of bulk material (iron ore, manganese ore and chromite ore) from the Utah Point Multi-User Bulk Handling Facility (Utah Point Facility) in Port Hedland.

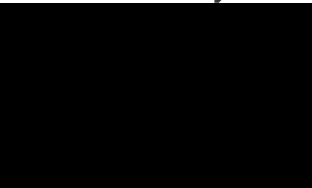

PPA seeks an amendment to the conditions of L8937 to:

- increase the permitted total export volume from 21.35 million tonnes per annum (Mtpa) to 24.10 Mtpa; and
- include Spodumene ore as an approved bulk material with a permitted export volume of up to 3 Mtpa.

PPA notes that the conditions of L8937 provide for a volume increase of commodities up to 10% of permitted total volume. PPA's amendment application is included as Attachment A.

If you have any queries regarding this application, please contact PPA's Environment Advisor, 

Yours sincerely

Chief Executive Officer
