I would be interested to know how you plan on educating the public on cross contamination.
Will supermarkets be placing a raw roast chicken in the same bag as a child's apple?
Will the bag that granny is using today to carry her mince meat in be the same bag that she puts her grandchild's dummy in?
Seriously!!
The health risks and lack of consideration for the public's safety is overwhelming.
Perishables that carry pathogens should be placed in disposable bags.

Sherry
